location

Avenue Henri Lepage 7
1300 Wavre Belgium
Brabant Wallon BE

Client

CPAS Wavre

Price

€13.000.000

Architects

DDV

Engineering Office

BE Lemaire

Surface area above ground

13 300m²

Construction period

6 years

Start work

10-2011

End of work

10-2017

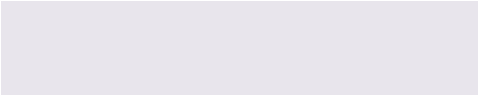

The project consists of the demolition and subsequent reconstruction, in two phases, of the existing nursing home to achieve a capacity of 154 beds. The configuration of the building (in the shape of a double cross) significantly reduces the distances between the lifts, the centrally located services and the rooms, increasing the efficiency of services and the comfort of residents. The significant level difference of Lepage Avenue allows access to the house at ground level, with some communal functions (lounge and restaurant) above the street. The "village square" unites all communal functions.

The view from the Brasserie and lounges is exceptionally beautiful. The old part of the town, dominated by the church, can be seen with the forest in the background. These spaces are ideally oriented to the southwest. They are surrounded by open terraces. The town square is ideally located to encourage exchanges, individual development and openness to the outside world, as proposed in the "life project" in the house charter.
